

Xin Li;

Full Stack & Systems Software Engineer

// Sydney, NSW, Australia | isphinx@me.com | 0455 412 054 | linkedin.com/in/xin-li-a99321108 | github.com/isphinx

// summary

Systems-focused full stack engineer with 15+ years building software where latency, throughput, and reliability are the product. Equally at home profiling a hot execution path in Rust or C++, architecting Go and Node.js services behind GraphQL and gRPC, and shipping the Next.js/TypeScript front end that consumes them. An early and pragmatic adopter of AI-assisted development – using Claude and Cursor for architecture exploration, large-scale refactoring, and test generation – to compress delivery cycles across the entire stack.

// skills.go

```
var skills = map[string][]string{
  languages:  {C/C++, C#, Rust, Go, Python, TypeScript, JavaScript, SQL, Lua, PHP, PL/SQL},
  frontend:   {Next.js, React, Tailwind CSS, Shadcn UI, Flutter, HTML5/CSS3},
  backend:    {.NET Core, Node.js, PayloadCMS, Keystone.js, GraphQL, REST, gRPC, Protobuf, Gevent},
  cloud:      {Kubernetes, Docker, AWS, GCP, CI/CD, Git, Linux},
  data:       {PostgreSQL, MongoDB, MySQL, Oracle, Redis, Memcached},
}
```

// work_history – git log --graph --date=short

○ Full Stack Software Engineer @ BCR Australia

Sydney, Australia | Feb 2026 – Present

// stack: .NET, C#, Rust, Kubernetes, Docker, CI/CD, Next.js, React, TypeScript, Tailwind CSS

- **SaaS Platform Evolution:** Drove the architectural evolution of legacy .NET monolithic systems into a high-availability, multi-tenant SaaS platform, containerizing core trading services onto Kubernetes.
- **Rust Performance Optimization:** Re-engineered the high-frequency rebate calculation engine using Rust, significantly increasing processing throughput and cutting execution latency during peak market activity.
- **Modern Frontend UI/UX:** Architected responsive financial dashboards using Next.js, React, TypeScript, and Tailwind CSS, giving traders sub-second real-time analytics and order management.
- **CI/CD & Deployment:** Engineered automated CI/CD pipelines for microservice deployments, automated testing, and zero-downtime rollouts.

○ Senior Full Stack Software Engineer @ InfiGaming

Hobart / Remote, Australia | Apr 2025 – Feb 2026

// stack: Go, SaaS Architecture, Kubernetes, Next.js, React, TypeScript, Tailwind CSS, PSP APIs, gRPC

- **Go SaaS Microservices:** Architected scalable, low-latency microservices for a high-concurrency iGaming SaaS platform serving global enterprise clients.
- **Multi-Tenant & Wallet Infrastructure:** Built secure multi-tenant portals and core wallet services with real-time balance tracking, multi-currency support, and transaction auditing.
- **Payment Gateway Aggregation:** Integrated global PSP APIs for automated deposit/withdrawal workflows, enforcing idempotent processing and security validation.
- **Responsive Frontend Apps:** Delivered modular management portals and consumer-facing interfaces with Next.js, React, and Tailwind CSS.

○ Senior Web Developer @ Media Marketing Group

Sydney, Australia | Mar 2021 - Apr 2025

// stack: PayloadCMS, Keystone.js, GraphQL, TypeScript, React, Next.js, Tailwind CSS, Flutter, AWS

- **Headless E-Commerce Backends:** Engineered backend solutions with PayloadCMS, Keystone.js, GraphQL, PostgreSQL, and MongoDB, integrating logistics/POS APIs (SwiftPOS, Retail Express, Shippit, Sherpa).
- **Web & Mobile Frontends:** Shipped responsive web apps with Next.js and Tailwind CSS, plus cross-platform mobile apps with Flutter.
- **Cloud Infrastructure:** Managed containerized deployments on AWS (ECS, EC2, Lambda) with high uptime and optimized asset delivery.

○ C++ / Backend Software Engineer @ Intevalue Services, Inc.

Manila, Philippines | Mar 2016 - Mar 2017

- Developed and maintained core server engines for high-traffic online gaming platforms (Baccarat), optimizing socket connections and data pipelines.
- Implemented backend APIs using C++/Boost, Go, and Oracle Databases (PL/SQL) for real-time game logic and high-throughput persistence.
- Designed unified binary network protocols using Protobuf for server-to-client communication.

○ Python Backend Engineer @ Mobartsgame

Beijing, China | Jul 2014 - Mar 2016

- Optimized mobile game server infrastructure using Python and Gevent (coroutines) for high-concurrency non-blocking network I/O.
- Integrated Redis as an in-memory caching layer over MySQL, drastically improving player data retrieval performance.

○ C++ Software Engineer @ Dawsome / GAME

Beijing, China | Jan 2010 - Jul 2014

- Designed distributed RPG server frameworks using C++ and Boost.Asio as the networking core, routing low-latency packets across server clusters.
- Integrated Lua scripting engines into C++ cores for dynamic feature updates.

○ Software Engineer @ KongZhong Corporation

Beijing, China | Dec 2004 - Nov 2007

- Designed and maintained MMORPG game server engines on Windows using C++ and I/O Completion Ports (IOCP).
- Developed native mobile action games on Symbian (C++) and WinCE (C#, DirectDraw) platforms.

// education

Master of Information Technology and Systems | University of Tasmania, Australia | 2020

Bachelor of Computer Science and Technology | Tianjin Normal University, China | 2009
