Sydney, NSW, Australia | isphinx@me.com | 0455 412 054 | linkedin.com/in/xin-li-a99321108

SUMMARY

Full Stack & Systems Software Engineer with 15+ years of software development experience across Australia and international markets. Proven track record in building high-throughput SaaS platforms, low-latency financial trading engines, and modern microservices using **.NET/C#, Rust, Go (Golang), C++, Python, and TypeScript (Next.js/React)**. Adept at transforming legacy architectures into cloud-native **Kubernetes** deployments, optimizing execution performance, and delivering robust full-stack solutions with high availability.

SKILLS & TECHNOLOGIES

- **Languages:** C/C++, C#, Rust, Go (Golang), Python, TypeScript, JavaScript, SQL, Lua, PHP, PL/SQL
- **Frontend:** Next.js, React.js, Tailwind CSS, Shadcn UI, Flutter, HTML5/CSS3
- **Backend & Frameworks:** .NET Core, Node.js, PayloadCMS, Keystone.js, GraphQL, RESTful APIs, gRPC, Protobuf, Gevent
- **Cloud & DevOps:** Kubernetes (K8s), Docker, AWS (EC2, ECS, Lambda), GCP, CI/CD Pipelines, Git, Linux
- **Databases & Caching:** PostgreSQL, MongoDB, MySQL, Oracle, Redis, Memcached

WORK EXPERIENCE

Full Stack Software Engineer | BCR Australia

Sydney, Australia | Feb 2026 – Present **Tech Stack:** .NET, C#, Rust, SaaS Architecture, Kubernetes (K8s), Docker, CI/CD, Next.js, React, TypeScript, Tailwind CSS

- **SaaS Platform Evolution:** Drove the modern architectural evolution of legacy .NET monolithic systems into a high-availability, multi-tenant SaaS platform, containerizing core trading services and deploying onto Kubernetes (K8s).
- **Rust Performance Optimization:** Re-engineered the high-frequency rebate calculation engine using Rust, achieving significant increases in data processing throughput and reducing execution latency during peak market activity.
- **Modern Frontend UI/UX:** Architected responsive financial dashboards using Next.js, React, TypeScript, and Tailwind CSS, providing traders with sub-second real-time analytics and intuitive order management interfaces.
- **CI/CD & Deployment:** Engineered automated CI/CD pipelines to streamline microservice deployments, automated testing, and zero-downtime production rollouts.

Senior Full Stack Software Engineer | InfiGaming

Hobart / Remote, Australia | Apr 2025 – Feb 2026 **Tech Stack:** Go (Golang), SaaS Architecture, Kubernetes, Next.js, React, TypeScript, Tailwind CSS, Payment Gateways (PSP APIs), gRPC

- **Go SaaS Microservices:** Architected and developed scalable, low-latency microservices using Go (Golang) for a high-concurrency iGaming SaaS platform serving global enterprise clients.
- **Multi-Tenant & Wallet Infrastructure:** Built secure multi-tenant management portals and core user wallet services, guaranteeing real-time balance tracking, multi-currency support, and financial transaction auditing.
- **Payment Gateway Aggregation:** Integrated global Payment Service Provider (PSP) APIs for automated user deposit and withdrawal workflows, enforcing idempotent processing and security validation.
- **Responsive Frontend Apps:** Developed modular multi-tenant management portals and consumer-facing web interfaces using Next.js, React, TypeScript, and Tailwind CSS.

Senior Web Developer | Media Marketing Group

Sydney, Australia | Mar 2021 – Apr 2025 **Tech Stack:** Headless CMS (PayloadCMS, Keystone.js), GraphQL, TypeScript, React, Next.js, Tailwind CSS, Flutter, PostgreSQL, AWS

- **Headless E-Commerce Backends:** Engineered scalable e-commerce backend solutions utilizing PayloadCMS, Keystone.js, GraphQL, PostgreSQL, and MongoDB, integrating logistics and POS APIs (SwiftPOS, Retail Express, Shippit, Sherpa).
- **Web & Mobile Frontends:** Designed and deployed responsive web applications with Next.js, React, and Tailwind CSS, alongside cross-platform mobile apps built with Flutter.
- **Cloud Infrastructure:** Managed containerized infrastructure deployments on AWS (ECS, EC2, Lambda), ensuring high uptime, seamless scalability, and optimized asset delivery.

C++ / Backend Software Engineer | Intevalue Services, Inc.

Manila, Philippines | Mar 2016 – Mar 2017

- Developed and maintained core server engines for high-traffic online gaming platforms (Baccarat), optimizing socket connections and data pipelines.
- Implemented backend APIs using C++/Boost, Go, and Oracle Databases (PL/SQL) to support real-time game logic and high-throughput data persistence.
- Designed unified binary network protocols using Protobuf for server-to-client communication.

Python Backend Engineer | Mobartsgame

Beijing, China | Jul 2014 – Mar 2016

- Optimized mobile game server infrastructure using Python and Gevent (coroutines), delivering high-concurrency non-blocking network I/O.
- Integrated Redis as an in-memory caching layer over MySQL, drastically improving player data retrieval performance.

C++ Software Engineer | Dawsome / GAME

Beijing, China | Jan 2010 – Jul 2014

- Designed distributed RPG server frameworks using C++ and Boost.Asio as the networking core, processing low-latency packet routing across server clusters.
- Integrated Lua scripting engines into C++ cores for dynamic feature updates.

Software Engineer | KongZhong Corporation

Beijing, China | Dec 2004 – Nov 2007

- Designed and maintained MMORPG game server engines on Windows using C++ and I/O Completion Ports (IOCP).
- Developed native mobile action games on Symbian (C++) and WinCE (C#, DirectDraw) platforms.

EDUCATION

- **Master of Information Technology and Systems** | University of Tasmania, Australia (*Finished 2020*)
- **Bachelor of Computer Science and Technology** | Tianjin Normal University, China (*Finished 2009*)
